

STÉARINERIE **DUBOIS**

*Our esters in mode Expert*

Unveiled at In-Cosmetics

STÉARINERIE DUBOIS REINVENTS  
EXTREME COMFORT AND "SECOND SKIN" PROTECTION  
WITH A NEW POLYMER ESTER:

**DUB ESTOLINE®**

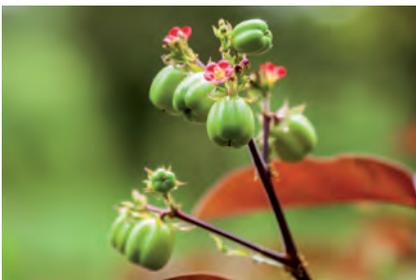

*The cocooning ingredient "par excellence"*

## A "BUBBLE OF COMFORT" INGREDIENT INSPIRED BY NATURE AND WELCOMED BY THE ENVIRONMENT

**STÉARINERIE DUBOIS** conceives, develops and produces esters that facilitate formulation (especially green formulation) and that offer the end user perceptible performance and sensory experiences.

**DUB ESTOLINE**<sup>®</sup> was developed in this spirit, as always with the desire to offer ingredients that protect the integrity of the environment and the people who contribute to the company's projects.

Based on the concept of the skin's barrier function, **DUB ESTOLINE**<sup>®</sup> is derived from castor oil, resulting in a new-generation film-forming active ingredient, conceived like a breathing second skin, both functional and pleasurable. This polymer ester stands out for the exceptional sensations of softness and comfort that it delivers. Its "cocooning" effect provides thorough protection against the effects of pollution and other external stress factors that exacerbate the signs of premature aging. The new best friend of fragile, sensitive skin.

*This multifunctional ester*, is especially useful for improving the sensory profile and effectiveness of skincare products, but also for developing haircare, makeup and suncare formulas with superior qualities.

The fruit of several years of research, **DUB ESTOLINE®** is protected by patent registration. This polymer ester meets the new expectations of consumers avid for cosmetics that are beneficial for both the skin and the environment.

### *Its strong points:*

- A palm-free ingredient derived from castor oil
- A 100% biodegradable, 87% natural raw material
- A polymer ester produced using green chemistry processes
- Results in pleasurable, sensorial skincare formulas that preserve the cutaneous ecosystem
- A multifunctional ester with proven effectiveness, in particular as a natural hydration booster
- Mesh-structure dispersion upon contact for an incredible surface feel
- Affordable and easy to use in formulation

In its natural state, **DUB ESTOLINE®** has a luscious, golden, honey-like look. It immediately evokes the possibility of a skincare syrup, especially because it can be incorporated in a formula at very high doses – with no sticky feel, of course.

**DUB ESTOLINE®** makes it possible to reinvent the cutaneous barrier effect with incomparable comfort and no heavy feel. The skin is instantly protected and softened, the hair is naturally coated with no added silicones, and makeup is enhanced with a skincare effect.

# STÉARINERIE DUBOIS, A RESPONSIBLE, SOCIALLY CONSCIOUS, CIVIC-MINDED COMPANY

Founded nearly two centuries ago and an expert in glycerides from the beginning, Stéarinerie Dubois continues to enjoy strong growth in France and worldwide, driven by its industrial expertise and innovations. The company was recently granted AEO (Authorized Economic Operator) status, which will facilitate its deployment as an international exporter.

Maintaining respect for human life and the environment, the company develops, produces and markets a comprehensive range of products and solutions – primarily added-value esters – for industrial clients in all sectors, in particular cosmetics, food products and pharmaceuticals. Its ambition is to be a world leader in technological glycerides for the sectors it serves.

From its headquarters located in the heart of a natural park, Stéarinerie Dubois achieves its goals in harmony with its exceptional environment and the entire supply chain, always attentive to its stakeholders. Its governance, ethics and family shareholding guarantee the perennial viability that they expect.

CEO *Hervé Gondrand*, a descendant of the company's founder, comments:  
*"The history of Stéarinerie Dubois, its professional activities and its values perpetuates a tradition of responsibility that I uphold. I want to pursue its mission by building a company that is responsible and civic-minded, toward its employees as much as its clientele and the community."*

Its human scale, fast reaction time and innovation capacity, as well as the quality of its clean production, make Stéarinerie Dubois a reliable industrial partner. Its production processes comply with the principles of green chemistry.

Firm in its convictions in these areas, Stéarinerie Dubois has formalized its intentions in a far-reaching CSR policy.

## Social commitment

As a major economic and industrial player in a rural region, pursuing a dynamic employment policy, Stéarinerie Dubois attaches great importance to its co-workers' development, diversity and employability.

A signatory of the UN Global Compact in 2017, Stéarinerie Dubois reaffirms its commitment to uphold the principles of responsibility regarding human rights, labor practices, environmental protection and the fight against corruption.

Stéarinerie Dubois does everything in its power to ensure the physical and mental integrity of all of its employees, in terms of preventive measures, training, methods and equipment. Every employee is directly involved in protecting health and safety in the workplace, in keeping with a stated policy of achieving an accident rate of zero.

Combining flexibility, attentiveness to market trends and the integration of numerous reference systems (BPF, ISO 9001, ISO 14001, ISO 22000...), the company's work teams do their utmost to meet its partners' needs.

This year we have obtained ISO 9001:2015 certification, confirming the excellence of our management system and client relations. Qualification is based on compliance with all regulatory requirements, with a 360° perimeter including products, people, services, etc.

## Environmental commitment

STÉARINERIE DUBOIS has undertaken an ambitious certification policy, including RSPO Mass Balance, SG, COSMOS and NATRUE certification, allowing the company to participate fully in the implementation of an ethical supply chain. To serve its clients better, it has also obtained Kosher and Halal certification for many products.

All of the company's projects are backed by an ongoing investment in its industrial facilities. For example, a new production unit was commissioned in 2016 at the Scoury site, requiring an investment of several million euros and the deployment of a new team of operators. This represents genuine added value for the company in terms of efficiency and reaction time, and thus in terms of improved client relations. A number of similar large-scale projects are in the works for the years to come.
